

- The **crontab -e** configuration showing the scheduled task.

The screenshot shows a terminal window titled "Ubuntu on DESKTOP-CNV4E20 - Virtual Machine Connection". The window contains the GNU nano 8.7.1 editor editing the file `/tmp/crontab.1GokXL/crontab`. The content of the file is a standard crontab configuration template with comments explaining the syntax and an example task.

```
GNU nano 8.7.1 /tmp/crontab.1GokXL/crontab
# Edit this file to introduce tasks to be run by cron.
#
# Each task to run has to be defined through a single line
# indicating with different fields when the task will be run
# and what command to run for the task
#
# To define the time you can provide concrete values for
# minute (m), hour (h), day of month (dom), month (mon),
# and day of week (dow) or use '*' in these fields (for 'any').
#
# Notice that tasks will be started based on the cron's system
# daemon's notion of time and timezones.
#
# Output of the crontab jobs (including errors) is sent through
# email to the user the crontab file belongs to (unless redirected).
#
# For example, you can run a backup of all your user accounts
# at 5 a.m every week with:
# 0 5 * * 1 tar -zcf /var/backups/home.tgz /home/
#
# For more information see the manual pages of crontab(5) and cron(8)
#
# m h dom mon dow   command
```

- **crontab -l** showing the installed Cron entry.

The screenshot shows the same terminal window as before, but now displaying the output of the `crontab -l` command. The content of the file is the same as the previous screenshot, but with an additional line at the bottom representing the installed cron entry.

```
GNU nano 8.7.1 /tmp/crontab.1GokXL/crontab *
# Edit this file to introduce tasks to be run by cron.
#
# Each task to run has to be defined through a single line
# indicating with different fields when the task will be run
# and what command to run for the task
#
# To define the time you can provide concrete values for
# minute (m), hour (h), day of month (dom), month (mon),
# and day of week (dow) or use '*' in these fields (for 'any').
#
# Notice that tasks will be started based on the cron's system
# daemon's notion of time and timezones.
#
# Output of the crontab jobs (including errors) is sent through
# email to the user the crontab file belongs to (unless redirected).
#
# For example, you can run a backup of all your user accounts
# at 5 a.m every week with:
# 0 5 * * 1 tar -zcf /var/backups/home.tgz /home/
#
# For more information see the manual pages of crontab(5) and cron(8)
#
# m h dom mon dow   command
*/1 * * * * /home/ola/ssh_alant.sh_
```

- **Detection output generated after the scheduled script executed.**
